

It's the details that count

For an appreciably softer latching that is above all gentle on the door frame, CESlocks has designed a new damp latch made of a high-quality synthetic material.

Thanks to the damp latch, the latch head hits the frame much more gently, which prevents scratching marks so that these locks are especially valuable for use with high-quality door frames. Sound absorbing materials are standard, both at the latch and in the interior, so these locks stand out by their particularly silent latching.

The new steel-ring borne TENAX clamp follower, a CESlocks development, allows an easy insertion of the spindles from both sides. Leaf springs inside the follower locate the spindle and ensure its perfect fit.

Your specialist dealer for CES security products:

CES Premium Class locks

Our Premium Class

With its new Premium Class, CESlocks has extended its product offering of high-quality lock solutions for the demanding industrial building business.

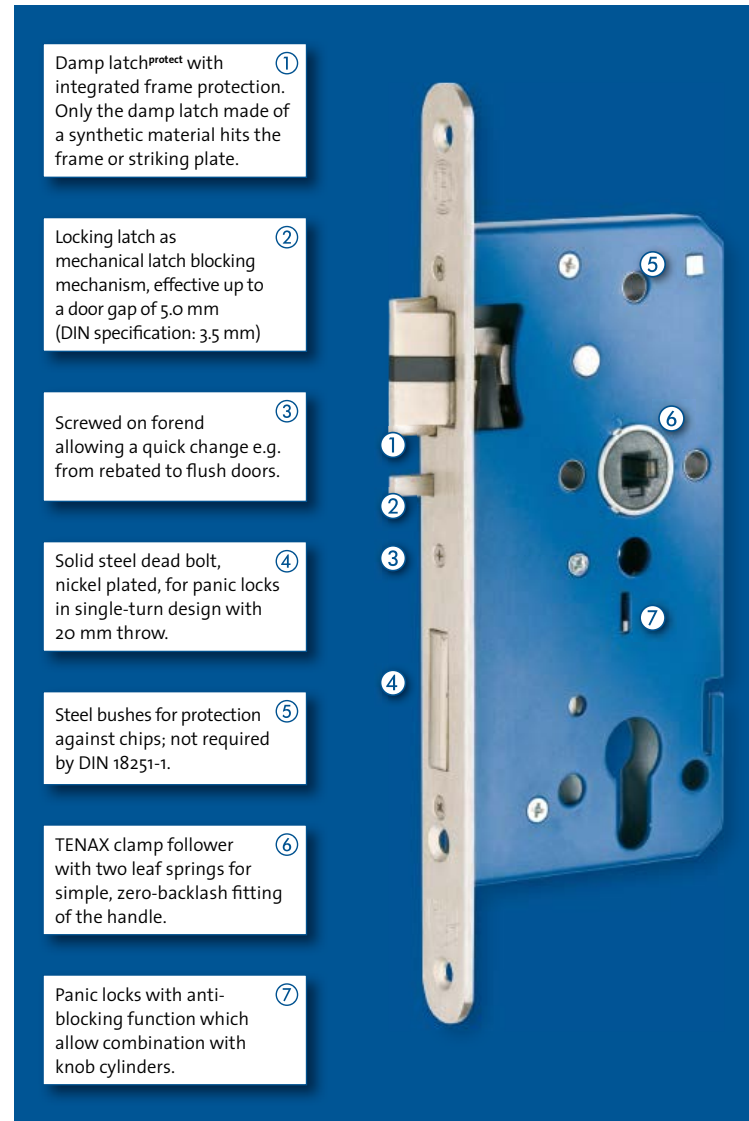

Tested and certified by the Dortmund materials testing institute MPA according to current standards (DIN 18250, DIN EN 12209 and DIN EN 179), Premium Class locks combine high ease of use with maximum security.

Various lock types are available to suit your particular application.

The top of the line version combines all features in a single lock: silent operation, soft latching in the frame, locking latch bolt, fire rating and panic function.

For applications in which a locking of the door is not required, the locks with locking latch bolt are a cost-efficient alternative to the often used self-locking panic locks.

These locks are also suitable for use in hotels, e.g. as a latch lock in combination with electronic fittings.

1 Damp latch^{protect} with integrated frame protection. Only the damp latch made of a synthetic material hits the frame or striking plate.

2 Locking latch as mechanical latch blocking mechanism, effective up to a door gap of 5,0 mm (DIN specification: 3,5 mm)

3 Screwed on forend allowing a quick change e.g. from rebated to flush doors.

4 Solid steel dead bolt, nickel plated, for panic locks in single-turn design with 20 mm throw.

5 Steel bushes for protection against chips; not required by DIN 18251-1.

6 TENAX clamp follower with two leaf springs for simple, zero-backlash fitting of the handle.

7 Panic locks with anti-blocking function which allow combination with knob cylinders.

The right lock for every application

Premium locks with panic function „E“ for fire-rated doors* according to DIN 18250, class 3 EN 179: 377B1352AB

- Fire-rated panic lock 9.000E
- Fire-rated panic lock with locking latch bolt 9.000E-SP

Premium locks for fire-rated doors* according to DIN 18250, class 3 EN 12209: 3X810G2BA30

- Fire-rated industrial building lock 9.000
- Fire-rated industrial building lock with locking latch bolt 9.000SP

Premium locks for fire-rated doors* according to DIN 18250, class 1 EN 12209: 3X810G1BA30

- Fire-rated industrial building latch lock 9.000F
- Fire-rated industrial-building latch lock with locking latch bolt 9.000F-SP

Premium locks according to DIN 18251-1, class 3

- Industrial-building lock 8.000
- Industrial-building lock 8.000WC
- Industrial-building latch lock 8.000F
- Industrial-building dead lock 8.000R
- Industrial-building lock with locking latch bolt 8.000SP
- Industrial-building latch lock with locking latch bolt 8.000F-SP
